

# Telescopic Security Posts

Telescopic Posts can be supplied with recessed reflective bands

Stainless Steel Telescopic Security Post

A range of Telescopic Security Posts provide a simple, secure and cost effective method of protecting your premises. Precision manufactured, these security posts are the perfect barrier to crime. Strategically located on forecourts, car parks or shop fronts security posts are a true 24 hour deterrent, whilst remaining aesthetically pleasing.

The security posts are raised vertically out of the ground and locked in seconds into the upright position using its integral high security push button lock. When not in use the post slides discretely into its host tube until just below ground level and the steel flap is closed flush.

Telescopic posts are also available with an added assisted lift feature which reduces the effective operating weight of the post allowing them to comply with new Health & Safety Guidelines

Post Type	Product Code	Above Ground mm	Below Ground mm	Diameter mm	O/A wall Thickness	Gross Weight Kg	Operating Weight Kg
